/note="Organ: mixed (see below); Vector: pT773D-Pac
/(Pharmacia) with a modified polylinker; Site_1: Not I;
Site_2: Ecc RI; Equal amounts of plasmid DNA from three
normalized libraries (melanocyte 2NbHM, pregnant uterus
NbHPU, and fetal heart NbHH19W) were mixed, and ss circles
were made in vitro. Following HAP purification, this DNA
was used as tracer in a subtractive hybridization
reaction. The driver was PCR-amplified cDNAs from pools of
5,000 clones made from the same 3 libraries. The pools
consisted of I.M.A.G.E. clones 260232-265223,
340488-345479, and 484488-489479."

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

CC A novel fusion protein comprises 2 dimer forming co-expressed amino CC acid sequences, each consisting of a homodimeric or heterodimeric CC receptor chain or ligand, with ligand-receptor binding activity, CC bound directly or via a peptide linker to a subunit of a CC the hormone's other subunits. The fusion protein, e.g. the thrombopoietin (TPO)/human chorionic gonadotrophin-beta subunit CC (hCG-beta) fusion protein denoted by the present sequence, significantly increases the biological activity of the hormone CC component, reducing the requirement for hormone itself and the CC number of injections needed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Ş

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Hybrid dimeric protein comprising two co-expressed units - each probased on receptor or ligand and a subunit of a heterodimeric hormone, especially FSH, for inducing follicular maturation Example; Pages 32-33; 60pp; English.

Can novel fusion protein comprises 2 dimer forming co-expressed amino caid sequences, each consisting of a homodimeric or heterodimeric creceptor chain or ligand, with ligand-receptor binding activity, common comprises 2 dimer forming co-expressed amino caid sequences, each consisting of a homodimeric or heterodimer with ligand-receptor binding activity, common directly or via a peptide linker to a subunit of a heterodimeric protein hormone capable of forming a heterodimer with the hormone's other subunits. The fusion protein, e.g. the thrombopoletin (TPO)/human chorionic gonadotrophin-alpha subunit (DG-alpha) fusion protein denoted by the present sequence, significantly increases the biological activity of the hormone component, reducing the requirement for hormone itself and the component, reducing the requirement for hormone itself and the componence 256 AA;

PSDB; T94021.

Whybrid dimeric protein comprising two co-expressed units - each plased on receptor or ligand and a subunit of a heterodimeric based on receptor or ligand and a subunit of a heterodimeric romance, especially FSH, for inducing follicular maturation sexample; Pages 37-38; 60pp; English.

A novel fusion protein comprises 2 dimer forming co-expressed amino acid sequences, each consisting of a homodimeric or heterodimeric receptor binding activity, bound directly or via a peptide linker to a subunit of a heterodimeric protein hormone capable of forming a heterodimer with the hormone's other subunits. The fusion protein, e.g. the thrombopoietin (TPO)/human chorionic gonadotrophin-alpha subunit (hGG-alpha) fusion protein denoted by the present sequence, significantly increases the biological activity of the hormone.

            Claim 54; Fig 2; 100pp; English.

The sequence shows a native 30 kb TNF inhibitor which may be modified to contain at least one non-native cysteine residue, pref. at positions 1, 14, 105, 111 and/or 165. The non-native cysteine is joined to a non-peptidic polymer, pref. monomethoxy PEG via thio-ether bonds. Two such TNF inhibitor mols. may be linked via this non-peptidic spacer. The modified polypeptides show improved pharmoxinetic properties, i.e. increased mol. wt. hence reduced clearance rate following s.c. or systemic administration, increased sol. of native TNF inhibitors, and reduced antigenicity. The polypeptides may be used for treatment of TNF mediated diseases such as adult respiratory distress syndrome, pulmonary fibrosis, rheumatoid arthritis, inflammatory bowel disease and septic shock.                                                                                                                                                                                                                                                                                                                                                          This sequence is a truncated TNF-alpha receptor derivative, as encoded in pTNFRecd. This was produced as described in Q24440. This was produced as described in Q24440. This derivative lacks the 81 carboxyl terminal residues of the cytoplasmic domain. The derivative could be used in the regulation of TNF-alpha mediated responses by binding and sequestering human TNF-alpha e.g. in the treatment of pulmonary diseases, septic shock, HTV infection, malaria, viral meningitis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             18-OCT-1990; GB-022648.

PS Example A; Page 54-55; 93pp; English.

CC Hybrid peptides for binding cytokines, comprising a malaria parasite

CC (Plasmodium falciparum) peptide (capable of binding to a red blood

CC cell (RBC)) and a receptor peptide are claimed. R70103-25 are examples

CC of these hybrid peptides. R70108 is a fusion of tumour necrosis factor

CC receptor (in accordance with H Loetscher et al cell, vol. 61, 351-359)

CC and glycophorin binding protein (GBP) homologue (GBPH). The

CC cytokine can bind harmlessly to the RBC without deleterious effect.

CC The RBC protects the hybrid peptides from excretion from the kidney, and

CC due to steric hindrance prevents the cytokines binding to a receptor in

CC used, others include EBA 175 (175 kDa erythrocyte binding antigen), PMMSA

CC (pre major merozoite surface antigen) and the Duffy binding receptor

CC molecule (eg. exhibited by Plasmodium vivax). These peptides bind to

CC pref. glycophorin A, B and C, sialo glycoproteins, found on the surface

CC of RBCs. The hybrid peptides are thus used to lower the levels of free

CC cytokines in the circulation to reduce pathological damage.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             10-NOV-1995 (first entry)
10-NOV-1995 (first entry)
TNF-R-GBPH fusion protein.
Hybrid peptide; malaria parasite; Plasmodium falciparum; fusion protein; red blood cell; cytokine receptor; glycophorin binding peptide 130; GBPH 130; GBPH; glycophorin binding peptide homologue; glycophorin A; tumour necrosis factor receptor; TNF-R.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Prendergast KF;
WPI; 95-115452/15.
New hybrid peptide(s) for binding cytokine(s) - comprising a malaria parasite peptide capable of binding a red blood cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Key Location/Qualifiers misc_difference 230..269
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Chimeric Homo sapiens.

TRESULT OF CHRISH SEED OF SECOND SEED OF SEED 
PT a receptor peptide.

PS Example A; Page 53-54; 93pp; English.

CC (Pibrid peptides for binding cytokines, comprising a malaria parasite CC (Pibrid peptides for binding cytokines, comprising a malaria parasite CC (Plasmodium falciparum) peptide (capable of binding to a red blood CC cell (RBC)) and a receptor peptide are claimed. R70103-25 are examples CC of these hybrid peptides. R70107 is a fusion of tumour necrosis factor CC receptor (in accordance with H Loetscher et al Cell, Vol. 61, 351-359) CC and glycophorin binding protein (GBP) 130. The use of cytokine can bind CC receptors not normally found on RBCs means that the cytokine can bind CC harmlessly to the RBC without deleterious effect. The RBC protects the CC hybrid peptides from excretion from the kidney, and due to steric CC hindrance prevents the cytokines binding to a receptor in another cell. CC GBP 130 or GBPH (GBP homologue) are the prefd. malaria parasite peptides cc used, others include EBA 175 (175 kDa erythrocyte binding antigen), common control of the complex control of the control o
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁

Clone pTNF-BP15 was used to contruct pADTNF-BP, for transfection of e.g. CO57 cells. The expressed proteins are useful prophylactically and therapeutically to control disorders which involve the damaging effects of TNF-alpha or -beta (e.g. infectious or parasitic diseases, shock, cachexia, autoLumune diseases, adult respiratory distress syndrome etc., or side effects of treatment with TNG-alpha). They can also be used as diagnostic reagents for assaying TNF and in study of TNF-receptor interactions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  WPI; 95-115452/15.

New hybrid peptide(s) for binding cytokine(s) - comprising a malaria parasite peptide capable of binding a red blood cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Hybrid peptide; malaria parasite; Plasmodium falciparum; fusion protein; red blood cell; cytokine receptor; glycophorin binding peptide 130; caphorin binding peptide homologue; glycophorin A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   R70107;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             06-APR-1990; 106624.

                                                                         The linker may comprise 5-100 amino acids selected from Gly, Asp, Ser, Thr and Ala. These linkers separate the individual moeities by such a distance that each component of the fusion prottien is capable of folding into the secondary or tertiary structure required for its biological activity. These fusion proteins may be used in therapy, diagnosts and assays for conditions mediated by TNF or IL-1, particularly in conditions in which both TNF and IL-1 play a causitive role. They may be used to treat cachexia, Theumatoid arthitis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                    New fusion protein tumour necrosis factor and human interleukin-1 receptor - useful in therapy, diagnosis and assays of e.g. rheumatoid arthritis, diabetes, cerebral malaria, sepsis, etc. Disclosure; Page 57-59; 85pp; English.

The sequences given in R42058-59 repressent human tumour necrosis factor receptor (TNF-R) and the sequences in R42060-61 represent human interleukin-1 receptor (IL-IR). These sequences were used in the production of a fusion protein which conformed to one of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; tumour necrosis factor receptor; TNF-R; interleukin-1 receptor; IL-1R; fusion protein; linker; TNF; IL-1; cachexia; cerebral malaria; rheumatoid arthritis; diabetes; multiple sclerosis; septic shock; pulmonary fibrosis; silicosis; allograft; xenograft; rejection; graft verses host disease; sepsis; inflammation; allergy; graft.

Disclosure; Fig 21; 142pp; English.

The sequence comprises the entire 30 kD TNF inhibitor. The cloffrom which the sequence was deduced was isolated from a cDNA library prepd. from RNA form U937 cells treated with PMA/PHA. The whole gene can be inserted into expression vectors for proof TNF inhibitor for use in the treatment of inflammatory and degenerative diseases. The active protein is claimed (Claim Control of TNF inhibitor for use in the treatment of inflammatory and degenerative diseases. The active protein is claimed (Claim Control of TNF inhibitor for use in the treatment of inflammatory and degenerative diseases. The active protein is claimed (Claim Control of TNF inhibitor for use in the treatment of inflammatory and degenerative diseases. Disclosure; Fig 1; 25pp; English.
The amino acid sequence is that of tumour necrosis factor alpha binding protein which contains the extracellular domain of human TNF alpha receptor. It is soluble and can be used in the regulation of TNF-mediated responses by binding and sequestering the cytokine. It can therefore be used therapeutically to treat disorders such as
                                                                                                                                                                                                                                                                                 R75084 standard;

CC Expression of this receptor is regulated by shedding of the extracellular receptor fragment. The p55 TNF-R can be shed in response to different inducing agents, e.g. phorbol myristate accetate (PMA), depending on cell type. The only region of the receptor whose structure affects the shedding response is the spacer region (see R75012) in the extracellular combination of the spacer region (see R75012) in the extracellular domain. This region is located close to a site of cleavage of the molecule, and links the Cys rich module to the transmembrane domain. The spacer region of the encoded protein was used to create the chimeras between human p55 TNF-R and murine epidermal growth factor receptor (RSF-R) that are represented by R75017-11. This spacer region was subjected to deletion mutations (R75013-25) and substitutions (R75016-47). Of the spacer region, the most important residues are (R75026-47). Of the spacer region, the most important residues are comportant of these. The shedding of the receptor is independent of the side chain identity of these residues, with the shedding the most conformation of the protein adversely effect the shedding process. The mutations shown in R75013-47 were introduced in order to create an conformation of a protease that is capable of cleaving the soluble TNF-R from the cell bound TNF-R. Fragments of these inhibitors can be seen in CC concerns a fragments of these inhibitors can be seen in CC concerns and a region of the second of rephancing TNF function.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                DNA encoding TNF binding protein and TNF- receptor - used in tumour treatment and to understand mechanismsm to TNF action Sisclosure; Fig 91(1-2); 51pp; German.

C raTNF-R8 (Q06284) was used to screen the HS913T cDNA library.

LiambdaTNF-R2 encodes the complete human TNF-R2 and was used to construct a plasmid (pADTNF-R) expressing the product the same way as pADTNF-BP (see Q06282). The expressed proteins are useful prophylactically and therapeutically to control disorders which involve the damaging effects of TNF-alpha or -beta (e.g. infectious or parasitic diseases, shock, cachexia, autoimmune diseases, adult respiratory distress syndrome etc., or side effects of treatment with TNG-alpha). They can also be used as diagnostic reagents for assaying TNF and in study of TNF-receptor interactions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match 48.0%;

Claim 1; Fig 1; 26pp; German.

Partial amino acid sequences were determined for the 55 and 75kD

TNF-BPs (see R11072-R11081) and oligonucleotide primers were
synthesised based on these partial sequences. The primers were used
to produce a cDNA fragment for use as aprobe to screen a human
placental cDNA bank constructed in lambda gt11. Positive clones were

NNA constructs comprising the TNF-BP coding
                                                                                                                                                                                                                                                                                                                            sequence may also contain a fragment encoding a human Ig domain. Recombinant constructs are used to transform cells to confer improved INF-binding properties.

MPsrch\_pp protein - protein database search, using Smith-Waterman algorithm

Tabular output not generated. Run on: Wed May 6 08:55:24 1998; MasPar time 13.64 Seconds 821.959 Million cell updates/sec

Title: >US-08-804-166-4 (1-307) from US08804166.pep 2341

Description: Perfect Score: Sequence: 1 SRTSLLLAFGLLCLPWLQEG......PSLPSPSRLPGPSDTPILPQ 307

Scoring table: PAM 150 Gap 11

Searched: 120446 seqs, 36531193 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database:

pir56 \ 1:pir1 2:pir2 3:pir3 4:pir4 5:nrl3d

Statistics: Mean 42.076; Variance 82.446; scale 0.510

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
